SharpLight's
non-invasive
aesthetic system

.....
SharpLight products offer non-invasive, clean and relatively painless treatment for the permanent reduction of hair. Suitable for any body area and size, from bikini lines and axilla to larger areas such as hands, legs, back, shoulders and abdomen. Our unique smooth-pulse technology is safe and reliable, offering excellent hair removal results, with minimum discomfort.

Frequently asked questions

SharpLight's system has enabled me to provide my patients the results they expect to receive. Betty Czajkowski, M.D.

About Pulsed Light Treatment

Q: What is pulsed light?

A: Pulsed Light systems use hand-held flash lamps that emit gentle pulses of light which are absorbed in different skin lesions. Excellent long term results are achieved when treating hair, superficial capillaries, skin pigmentation, acne and other skin lesions.

Q: How does light-based technology work?

A: Light based technology is based on a method called "selective photothermolysis," which works by selective destruction of a specified target without damaging surrounding tissue. When treating textural complaints such as fine wrinkles and large pores, the light stimulates the growth of collagen which makes the skin glow and look more youthful.

Q: Are pulsed-light aesthetic treatments painful?

A: No. During the procedure, a slight, momentary stinging sensation may be felt, but not pain.

Q: Are pulsed-light aesthetic treatments safe?

A: All pulsed-light treatments are non-invasive and safe, with minimum side effects.

About Hair Removal

Q: What is the average rate of hair growth?

A: About 0.35mm a day, but this varies depending on body area, age and gender.

Q: How many treatments are required?

A: The typical regimen is 5-7 treatment sessions, spaced 4-12 weeks apart, depending on the body area.

Q: Why are multiple treatments necessary?

A: About 20-25% of human hair follicles on the body are in the growth phase at any given time. This is the percentage of hair follicles that can be destroyed in a single treatment session. In order to eliminate almost 70% of the hair, treatment has to be repeated until the desired result is achieved.
